Project title: Hotel guests booking system

Project description

This is project will design a hotel booking system for incoming guests.

Project objective

The objective of the project is for incoming guests to be able to make a booking by inserting their information.

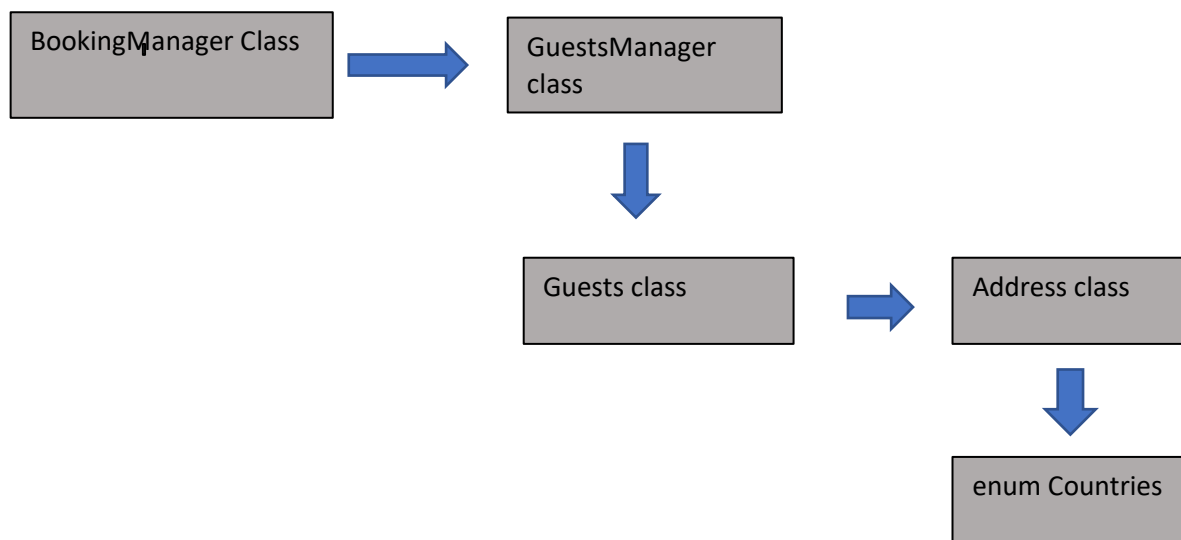

Why do I choose this project?

I chose this project because it qualifies for a real life use case project. Personally, I love traveling and booking accommodations during travel. This project will give me a greater picture of how booking a hotel for guests are design in real life as developer.

Who is this software for?

This software would be design for hotel management staff or any hotel booking company, but most specifically for staff who work in the front desk.

Project class diagram

Mainform uses the **BookingManager** class

BookingManager uses an object **GuestsManager** class

GuestsManager has list of **Guests** object

Guests has an object of **Address**

Address uses the enum **Countries**

Time schedule
